WHAT MOTIVATED US?

“The Role of Social Media Influencers in the Lives of Children and Adolescents” (Frontiers in Psychology, 2020)

SMIs may influence adolescents in both positive and negative ways, for example, motivating them to behave pro-socially or adopt healthier lifestyle choices as opposed to encouraging smoking, drinking, or even criminal and violent behaviour.

Should we be concerned about the influence of SMIs on young people? Should this be a concern for the government? Should SMIs be regulated, registered, and policed? Should brands responsible for any perceived undue content be sanctioned in any way, and should such findings be made public?
Objectives

- Raise awareness within the marketing field about the influence of social media influencers on adolescents
- Discuss ethical issues about the topic covered and bring the benefits, challenges, positive and negative impact of social media influencers in adolescents' lives
- Acknowledge the reader on how brands are promoting their products and content through social media influencers

Social Media Influencers (SMIs) in Context

The Impact of SMIs on Adolescents

Consumer Behaviour in a Digital Era – Generation Z in Perspective
Ryan (2014), states that SMIs are the online opinion leaders. They harness the power of the web to extol the virtues of products and brands that they like, and equally to denigrate those they find unsatisfactory. It can happen through blogs, podcasts, forums, and social media channels. Therefore, they have the virtual ear of the online masses’ (Ryan, 2014).

Social Media Influencers (SMIs) in Context

- They consider themselves expert in certain areas (such as their work, hobbies, or interests).
- People often ask their advice about purchases in areas where they are knowledgeable.
- When they encounter a new product they like, they tend to recommend it to friends and followers.
- They have a large social network circle and often refer people to one another based on their interests.
- They are active online, using social networking channels, websites, etc, to connect with their peers. (Double Click, 2006)
In 2020, the influencer “industry” is deemed to be worth 5-10 billion USD ($) (Brooks, 2019).

Gartner (2019) found that an estimated 84% of millennials are likely to be impacted by social media influencers content leading them to make a purchase or be more susceptible to doing so.

The most impacted and susceptible to be influenced by SMIs is Generation Z, made up of those born from 1995 to 2010 (Francis and Hoefel, 2018).
A study using 256 ($N=256$) adults and adolescents found that adolescents are more susceptible to be negatively influenced on the internet than adults (Kraut et al., 1998). Also, it shows large rises of depression and loneliness amongst the adolescent group (Kraut et al., 1998).

Curtis et al., research shows “a statistically significant relationship and moderate effect sizes between alcohol-related social media engagement and both alcohol consumption” as well as “a greater alcohol-related social media engagement was correlated with both greater self-reported drinking and alcohol-related problems” (Curtis et al., 2018).

Released in November 2018, a research carried out by scientists from the Department of Psychology at the University of Pennsylvania (USA), with 143 students ($N=143$), found that decreasing the time spent using social networks leads to considerable reductions in depression and loneliness (Hunt, Marx and Lipson, 2018).

A study investigating the effect on children’s ad libitum snack intake of social media marketing of snack foods via influencer Instagram profiles, found that influencer marketing of unhealthy foods led to the immediate food consumption of these foods by adolescents and children, while there was no such effect on influencers promoting healthy foods (E. Coates et al., 2019).
Although there are both positive and negative influences that SMIs can spread, perhaps one of the issues that can skew towards negative influences is that being an influencer is a new job, within a consumption market and society that expects influencers to work for their sponsor brands.

Literature review method aiming to create a foundation for advancing knowledge, contrasting concepts, outlining insights, fundamentally reviewing the topics, and producing insights about the main themes (Webster and Watson, 2002).

The literature review comprised a deep search using electronic journal databases such as: ScienceDirect, Elsevier, JSTOR, Emerald, Springer, Sage, and Pubmed.

Articles were chosen according to the following criteria: 1. Must be peer-reviewed; 2. The number of citations; 3. Relationship of the keywords and abstract with the topic covered in this paper; 4. The reliability and validation of research methods.

Collection of secondary data through surveys, reports and reliable research projects were employed.

Due to many elements causing a negative influence on adolescents by SMIs, researchers find that more should be done to protect the rights of kids and adolescents. The government should regulate and create policies to supervise how those undue influences have been generated and how would be possible to avoid them.

A gap in the literature shows that research is needed to unravel the impact of SMIs on adolescents that may have both desirable and undesirable consequences. While some previous studies have investigated the tendency of some people, especially students, to become SMIs, none to date have focused on the susceptibility of young people to undue influence by SMIs.
