grow from the same rootstock, and a particularly strenuous stretch of country road, in which low growing flowers and grasses had been cut back. The results were striking, with conspicuous splotches of wildflowers, which showed that they were both particularly effective and long lasting. The effect was most spectacular when the flowers were white and the contrast with the road was marked. The road itself of course was the star of the show, with its elegant curves and straight sections, and the whole scene was a fascinating study in contrasts.

The plants were all flowering in early summer, and the effect was even more striking in the early morning when the dew was still visible. The contrast between the bright yellow flowers and the dark green leaves of the grasses was particularly striking. The effect was so beautiful that it was difficult to believe that it was all natural. The road was a perfect example of how nature can be used to create beauty and interest.

The plants that were in flower included species such as wild daisies, cowslips, and buttercups. These are all very common in the area, and are often found in hedgerows and on the edges of roads. The effect was particularly striking when the flowers were white and the contrast with the road was marked. The road itself of course was the star of the show, with its elegant curves and straight sections, and the whole scene was a fascinating study in contrasts.
