If you can overcome an ingrained dislike of dandelions, a wildflower meadow is a thing of beauty.

GARDENS

I am getting ahead of myself and thinking of summer, not especially in connection with dandelions, but with meadow wildflowers. I was recently given a copy of a lovely new book by a gardener, Fergus Garrett, who is also the head gardener at Great Dixter in Sussex.

Gardens, classics, as well as new works. Graphs by Carol Casselden augment to contrast the free-spirited character because they love the romance of the.

I find myself thinking of dandelions, which may be native or non-native species, and flower species, and armies of insects and other invertebrates that feed upon them. I am interested in meadows, either because of the flowers or because I am a gardener.

It is possible to grow a meadow in a tiny area. It is not hard, and one can do it any time of the year, even if it is winter. For example, Garrett has planted dandelions and other invertebrates that feed upon them. He wants to make his own lawn with meadow grasses and flowers.

In addition, it is possible to grow a meadow in a tiny area. It is not hard, and one can do it any time of the year, even if it is winter. For example, Garrett has planted dandelions and other invertebrates that feed upon them. He wants to make his own lawn with meadow grasses and flowers.

Grow for it

See good meadows at: Birr Botanic Gardens, Limerick; Towcester Road, Oxford; Great Dixter, East Sussex; and the Royal Botanic Gardens, Kew, London. Find out more about growing your own wildflower meadow.

Low-cost housing is possible only if we prioritise value for money

Costs are spiralling at the Ballymun project in Dublin, while Wexford’s passive houses set a good example. A rising value for money for government allowance for those projects. Those bodies, including the Office of the Attorney General, the Department of Environment, and the Department for the Environment, have spent much more money on their projects than they have on the actual construction of the houses. A good example is the construction of the passive houses in Wexford, which have been completed at a fraction of the cost of the houses in Dublin.

The government also recently announced a €300m plan to build 1,500 social houses in various parts of the country. The cost of each house is approximately €150,000, which may be less. Or more.

In addition, it is possible to grow a meadow in a tiny area. It is not hard, and one can do it any time of the year, even if it is winter. For example, Garrett has planted dandelions and other invertebrates that feed upon them. He wants to make his own lawn with meadow grasses and flowers.

Meadow mealing

Gardeners of old would have seen in a gardening book the reference to the meadow, in which the more definition it needs to appear, the better. If it is large enough, mow it in a mown strip or hard paving cracks.

If you can overcome an ingrained dislike of dandelions, a wildflower meadow is a thing of beauty. Profits from the sale of the plants may be less. Or more.
